

Clinical Analytics

Overview

The TPG-DS team are experts at leveraging medical and pharmacy data to render advice and solutions for better patient care and to manage better outcomes.

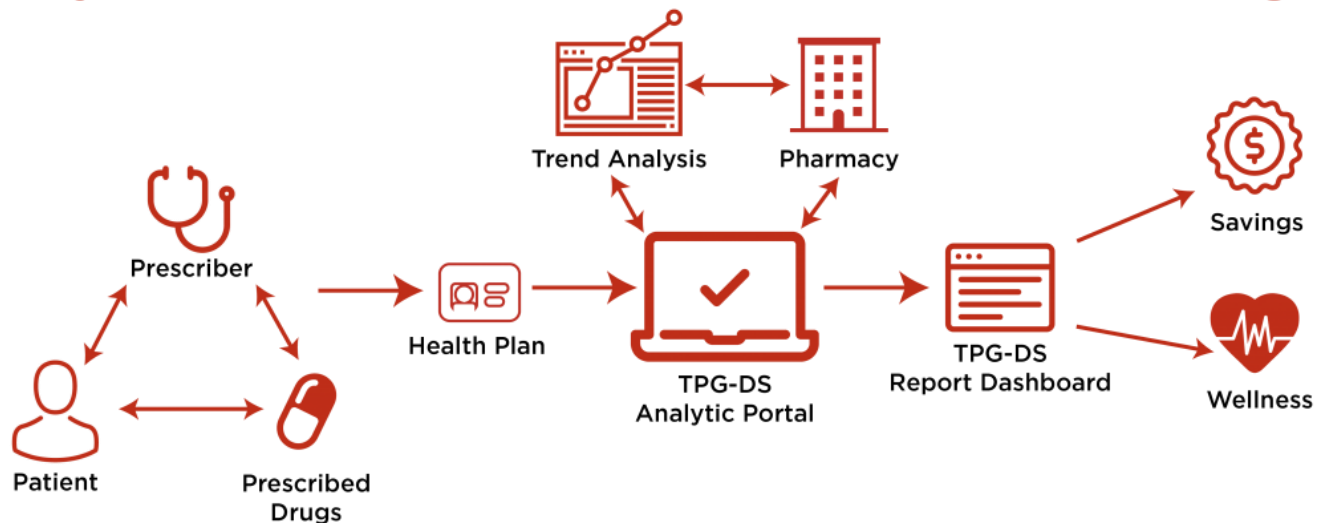

Solutions

Given the emergence of new delivery and reimbursement models and the convergence of payers and providers, access to robust clinical analytics can play a major role when making clinical decision.

TPG-DS delivers meaningful insights into patients and members care including cost, resources, and efficiency measures via clinical validated models and data attributes to help improve outcomes, with the goal of improving financial performance.

We deliver strategic insights to C-suite level executives at payors and employers to better address specific patient populations and render advice to assist with clinical decisions. Our tools also work to support Medication Therapy Management (MTM) and Comprehensive Medication Review (CMR) programs.

Analytic Process Achieves Member Health and Savings
