

Generic Drug Pricing Management

Overview

As part of the TPG Data Services (TPG-DS) Generic Drug Pricing Management Program we provide competitive drug pricing intelligence with specific acquisition cost and availability. Our program focuses on the availability of new generic drugs and fluctuating pricing in the marketplace.

TPG-DS has the knowledge, expertise, and resources to provide you with the information you need to efficiently manage your prescription drug program.

Our Philosophy

By understanding each client's unique needs, TPG-DS provides customized data that meets your requirements. We offer an unbiased, third-party perspective that allows you to evaluate if your level of reimbursement, range of discounts, and fee structure are adequate to support profitability and maintain efficiency.

Solutions

TPG-DS offers a range of solutions under our generic drug pricing management program. From an on-going standard subscription that provides updates on acquisition costs to a customized Maximum Allowable Costs (MAC) list, TPG-DS has the right solution to develop the appropriate strategy and process to manage your Generic Drug Pricing Program.

Estimated Acquisition Cost (EAC) Data

Manage drug costs more closely and gain access to TPG-DS' Estimated Acquisition Cost (EAC) subscription-based data service. Sample reports are available by request

Customized MAC Lists

Sudden increases and decreases in generic drug prices make it difficult for payors to set an appropriate MAC. Tailor your MAC pricing to align with your pharmacy network strategy to ensure a fair, consistent, and transparent methodology for reimbursement

Generic Drug Pricing Auditing and Benchmarking Professional Services

- Reduce the complexity and time behind sifting through volumes of data
- Deliver actionable advice to assist C-level suite decision-making
- Report automatically based on needs, yielding cost reduction opportunities
- Benefit from drug pricing expertise from TPG-DS financial and clinical performance expertise
